

CHRONOS HYBRID Planetarium™ Chosen Again

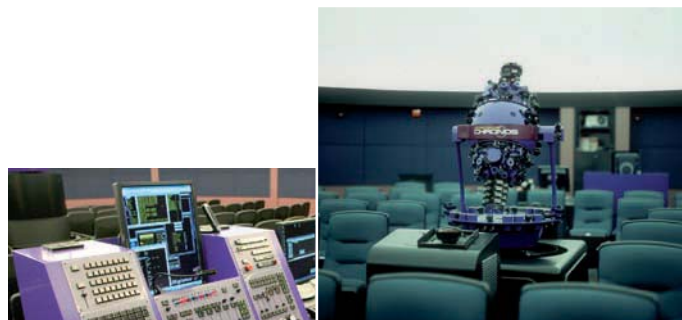

The CHRONOS HYBRID shows spectacularly beautiful stars, sun, moon, and planets, as shown from the opto-mechanical CHRONOS projector. The system's dynamic and colorful video is provided by a Digistar 3 SP2-HD video system. And the HYBRID control system synchronizes and links the two systems together seamlessly and effortlessly.

Even in the short time they had their first system, instructors quickly learned to use and really appreciate the live, manual control console which put hundreds of commands at their fingertips. Even in the first few weeks the curriculum was changed dramatically as instructors were able to illustrate so many phenomena previously unavailable in their decades-old traditional planetarium. So the choice of replacement was easy - another CHRONOS HYBRID Planetarium™.

GOTO INC is no stranger to repeat customers. Many GOTO customers have come back to us for a second or even third system as they renew their planetariums over the years. We're just not used to getting the second order so soon! GOTO congratulates the College of San Mateo upon the re-opening of their wonderful planetarium. We wish them many years of clear (and dry) CHRONOS HYBRID Planetarium™ skies in the future.

On February 23, 2007, the College of San Mateo opened the world's first GOTO CHRONOS HYBRID Planetarium™. Unfortunately, less than a month later, a catastrophic and unexplained sprinkler system activation totally flooded the planetarium, destroying the opto-mechanical and video projectors, as well as the HYBRID control console. As emergency crews mopped up the dome and engineers tried to figure out what triggered the deluge, insurance adjusters began to process damage claims.

And once the insurance payments were confirmed, the College of San Mateo immediately re-ordered another GOTO CHRONOS HYBRID Planetarium™! While they were free to choose any replacement system they desired, their brief experience teaching with the CHRONOS HYBRID was enough to reinforce their original reasons for choosing it.

New D3 SP2-HD video projectors bracket a new CHRONOS opto-mechanical projector to make the GOTO CHRONOS HYBRID Planetarium™.

The replaced HYBRID control console offers the ultimate in synchronized manual or automated control.

CSM staff and GOTO installers celebrate the replacement of flood-damaged equipment.

Eclipsed last year by a runaway sprinkler system, the CHRONOS HYBRID is again shining brightly!
