

## A Green Projector for a Green City

Kumamoto Japan, on Kyushu, the southernmost of Japan's large islands, is a beautiful, green, and very historic city. Blessed with abundant water, the environment is rich with natural and man-made wonders, such as the Kumamoto Castle. Recently, the Kumamoto City Museum asked GOTO INC to replace its older GOTO projector with the new CHRONOS II HYBRID planetarium system. The new CHRONOS II's gorgeous starry sky, brilliant sun, moon, planets, and very realistic 10,000,000 micro-star Milky Way is synchronized with a 4Kx4K full-dome video sky for a completely immersive GOTO HYBRID Planetarium™ experience.

Visitors to the planetarium will now enter the 16 meter dome, sit in one of 180 comfortable new seats and take virtual trips into Kumamoto's past and its future. The new barrier-free seating arrangement, new digital audio, and a newly re-paneled dome screen help to make this truly a wonderful upgrade. And, since the CHRONOS II uses only LED's as its light source, the Kumamoto planetarium will also do its part to keep the city green.
